

Toyota Forklift Part

Toyota Forklift Part - Since 1992, Toyota Material Handling inc., U.S.A., often known as TMHU, have been the best selling lift truck supplier in the United States. This company has been situated out of Irvine, California for well over 40 years, offering a wide-ranging line of quality lift trucks. With a great reputation of resilience and reliability, Toyota lift trucks have thrived in the competitive materials handling market. Quality is the keystone of Toyota's notorious Toyota Production System practiced at all manufacturing facilities, including TIEM, which stands for Toyota Industrial Equipment Manufacturing, located in Columbus, Indiana. The majority of the Toyota lift trucks sold in the U.S.A are built here.

Every one of Toyota's manufacturing facilities within Canada and the U.S. comply with the International Organization for Standardization or ISO 14001 standard. The Columbus TIEM plant has been honored on many occasions for its devotion to relentless progress and its environmentally friendly systems. It is the first and only producer to offer EPA and CARB-certified Compressed Natural Gas powered lift trucks on the market. For example, the Toyota 8-Series IC lift trucks emit 70 percent less smog forming emissions than the existing federal EPA standards and have complied with California's strict emission standards and regulations.

TMHU, U.S.A. - Leading the Industry

Brett Wood, President of TMHU, associates Toyota's accomplishment to its strong commitment to manufacture the finest quality lift trucks at the same time as delivering the utmost client service and support. "We must be able to learn and predict the needs of our customers," said Brett Wood. "As a leader, our success also depends on our ability to address our customers' operational, safety and environmental cost issues." TMHU's parent company, Toyota Industries Corporation, also referred to as TICO, is listed in Fortune Magazine as the world's principal lift truck dealer and is amongst the magazines prominent World's Most Admired Companies.

Redefining Environmental Responsibility

Toyota's parent company, Toyota Industries Corporation, has imparted an exceptional corporate principles towards environmental stewardship within Toyota. Toyota's loaded history of environmental protection whilst retaining economic viability can not be matched by other corporations and certainly no other resource handling manufacturer can yet rival Toyota. Environmental accountability is a fundamental characteristic of corporate decision making at Toyota and they are proud to be the first and only producer to provide UL-listed, EPA - and CARB -certified Compressed Natural Gas powered lift vehicles. Yet one more reason they remain a leader within the industry.

In 2006, Toyota released the 8-Series line. The 8-Series signifies both Toyota's innovation and leadership in the industry. It features an exclusive emission system that surpasses Federal EPA emission principles, and also meets California's more elaborate 2010 emission standards. The finished product is a lift vehicle that produces 70% less smog forming emissions than the existing Federal standards tolerate.

Also in 2006, Toyota established a partnership with the Arbor Day Foundation, furthering their dedication to the environment. Upwards of 57,000 trees have been planted in community parks and national forests damaged by natural causes such as fires, as a result of this relationship. 10,500 seedlings have also been scattered through Toyota Industrial Equipment's system of sellers to non-profit organizations and local customers to help sustain communities all over the United States

Toyota's lift vehicles provide enhanced output, visibility, ergonomics and durability, and most significantly, the industry's leading safety technology. The company's System of Active Stability, also known as "SAS", helps limit the possibility of mishaps and accidental injuries, in addition to increasing productivity levels while minimizing the potential for product and equipment damage.

System Active Stability can discern conditions that might lead to lateral instability and possible lateral overturn. When any of these factors have been detected, the SAS will instantly engage the Swing Lock Cylinder to re-stabilize the rear axle. This alters the lift truck's stability trajectory from triangular in shape to rectangular, offering a major increase in stability which substantially reduces the probability of an accident from a lateral overturn. The Active Mast Function Controller or the Active Control Rear Stabilizer also aids to avoid injuries or accidents while adding durability.

SAS was first launched to the market on the 7-Series internal combustion models in 1999 and subsequently catapulted Toyota into the industry leader for safety. Ever since then, SAS continues to be built-in to nearly all of Toyota's internal combustion machines. It is standard equipment on the latest 8-Series. There are more than 100,000 SAS-equipped lift vehicles in operation, exceeding 450 million hours combined. The increased population of SAS-equipped trucks in the field, along with compulsory operator training, overturn fatalities across all brands have decreased by 13.6% since 1999. Also, there has been an overall 35.5% fall in industry wide collisions, loss of control, falls and tip overs from a lift vehicle for the same period.

Toyota's pattern of brilliance reaches far beyond its technological achievements. The company maintains an extensive Operator Safety Training course to help consumers meet OSHA standard 1910.178. Instruction programs, video tutorials and various materials, covering a wide scope of subjects-from individual safety, to OSHA policies, to surface and load situations, are available through the vendor network.

Ever since the transaction of its first lift truck in the U.S. to the construction of its 350,000th lift truck produced in 2009 at Toyota Industrial Equipment Manufacturing, TMHU has maintained a solid presence in the U.S. This fact is demonstrated by the statistic that 99% of Toyota lift trucks sold in America now are built in the United States.

TMHU is based in Columbus Indiana and houses nearly 1 million square feet of manufacturing facilities over 126 acres of land. Facilities include a National Customer Center, as well as production operations and supply centers for equipment and service parts, with the entire investment exceeding \$113 million dollars.

The contemporary NCC was built to function for TMHU buyers and dealers. The facility includes a 360-degree showroom, a presentation theater complete with stadium seating for 32, an area for live product demonstrations with seating capacity for 120; a presentation theater; Toyota's Hall of Fame showcasing Toyota's story since the birth of its creator, Sakichi Toyoda, in 1867, and lastly a training center.

The NCC embodies Toyota's dedication to offering top-notch consumer service. TMHU's 68 authorized Toyota Industrial Equipment, or TIE dealers, along with 189 dealership locations all over the U.S, present the most wide-ranging and inclusive customer service and support in the industry. The company's new and Certified Used lift vehicles, service, components, and financing features make Toyota dealerships a one-stop shop to ensure total consumer satisfaction.
